(54) FDD/CDMA TRANSMISSION RECEPTION SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain the diversity effect and the interference reduction effect without employing of plural antennas and an interference cancellor for a mobile station by realizing transmission diversity using closed loop control by a transmitter and a receiver.

SOLUTION: User signal coders 101-1-101-k in a transmitter applies spread processing to user signals 10-1-10-k of k-sets of stations by codes assigned specifically to each user. Antenna selection/weighting circuits 103-1-103-k use an antenna selection signal or a weighting signal obtained by each user to select a transmission antenna of each user among N-sets of antennas 107-1-107-N or provide weighting the signal from each user and send the result to the antennas 107-1-107-N. A receiver measures the reception power of each pilot signal by differentiating the spread signal of the pilot signal from each antenna in this way to select a transmission antenna providing an excellent transmission characteristic thereby realizing the transmission diversity.

LEGAL STATUS

[Date of request for examination] 09.07.1996

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number] 2785812

[Date of registration] 29.05.1998

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
